General Comment

This regulation is blatantly unconstitutional and a gross violation of the public trust. Not only would it do nothing to prevent actual crime but it would shut down thousands upon thousands of law abiding, law loving firearm enthusiast blogs, video channels, television, and writing commitments, generating not only a multi million dollar industry, but tax dollars as well. Moreover, it will only serve corporate interests who will pay a premium in order to go through proper channels. Bluntly, this rule censors the First Amendment while attacking the Second. If this goes through it will be challenged in court and it will be struck down at a total waste of taxpayer time and money, in the mean time setting a dangerous precedent that the written and visual opinions of US citizens are somehow goods that can be tarried, embargoed, and sold.

Quite frankly this impacts me because firearms are a large part of not only my job but my recreation as well. This unfairly puts another burden on an entire industry of reviewers and professional writers and experts. Simply put, the gun industry generated \$38 billion in 2014, and this rule would put an unfair burden on the industry that other massive, taxable industries do not have. I feel as though GM, Ford, and Toyota do not have to ask State Department approval before showing off their vehicle specs--but imagine that, cars have metal, oil, and gasoline in them, and so does some of our military equipment. By this logic they should be beholden to the same rules.

It is not a sustainable rule, will do nothing to prevent misconduct, and indeed, will be so overbearing that jobs and tax revenue will be lost. I urge you to reconsider and to drop this rule. Thank you.

General Comment

I am very concerned with the ITAR Amendment Revisions to Definitions; Data Transmission and Storage. that was published in the Federal Register on June 3, 2015. I feel it is unnecessary to protect national security and is very questionable restriction when the First Amendment is taken into consideration. I would appreciate it if you could assist the citizens of the United States by contacting the appropriate people at the state department and express my concern. I hope that you are against this redefinition of ITAR items, but if you are not I would appreciate hearing from you why not.

I am a firearms enthusiast who works very hard to increase the accuracy of the guns that I shoot, I do this both for the personal pleasure and for competing. Like many others I use the internet as an information source in the quest for higher accuracy, when I am having trouble with accuracy I may ask a question like "The neck tension on my 6mmBR is inconsistent while seating Berger 105 g Hybrid Bullets". The responses that follow could be considered technical data yes, but the methodologies we employ to achieve consistent neck tension are not transferable to mass production of ammunition. So I find it hard to understand how this technical data is applicable to defense items.

Before I continue I should probably give you a little sketch of my vocational experience. I have worked in the defense industry first for a small company doing research in vehicle signatures and other signature related areas. I left the small company and went to work for the largest defense contractor in the world Lockheed Martin. While at Lockheed Martin I was the subject matter expert in optics both day and night, in that role I worked with ITAR-covered data every day. In the area of night vision technical data needs to be held very closely as all of the secrets are not known to the world. Furthermore, the capabilities of our optical systems are extremely sensitive as we can't allow our foes and potential foes understand what are sensing capabilities are.

In addition to my duties as the optical SME I was the lead engineer on a small unmanned aerial vehicle (UAV) product line called Desert Hawk, we sold Desert Hawk I+ and III to the British Army. As lead engineer I was working with citizens of the UK almost on a daily basis as was the rest of my engineering team, so I understand ITAR issues better than most shooters. Every aspect and detail of the Desert Hawk system that was not in the public domain was covered by ITAR regulations, for good reason because at that time there were very few UAV's flying so keeping the book closed at how we were able to build and fly the Desert Hawk UAVs was very important. I understand that leakages of sensitive information can and will cause unnecessary loss of life and assets.

Let's look ahead and assume we allow the discussion of firearm technical data on the internet to be covered by ITAR regulations why would we allow topics in computer science to be discussed on the same venues without approval from the state department? Theoretical academic discussions of computer cryptology and security are far closer to technical data that is applicable to defense systems then a few people talking about neck tension on 6mmBR cartridges. Continuing on the same path many classes in computer science taught in schools in the United States would have to be restricted to US nationals and the lectures held in a secure environment. When I taught Physics at the college level I would oftentimes use examples of firearms to clarify a point I would need to limit that discussion to secure facilities with only US nationals.

I don't know about you but I do not want to live in a society that puts such extreme limits on my freedom of speech, I thought my freedom of speech was protected by the First Amendment. It could be I was asleep when the supreme court found the First Amendment no longer constitutional, but I do not think that is the case.

Thanks,
wade

General Comment

This proposed ruling will negatively affect the following outside of infringing on the 1st and 2nd amendments: Employment rates, the economy, competence regarding safe handling of firearms, and good people being charged for crimes when after all this time have only been expressing their freedom of speech.

The internet will always be a place for information sharing. The majority of the firearms information that is out there is not used with criminal intent and if anything educates the community more so than ever before in regard to firearms, etc. If the information was such a threat or so criminalistic why has it not been addressed up until now?

It is hard to believe that our government is wasting their time with such matters when there is so many more important things to worry about and make positive changes towards. It is unfortunate how the government has been more and more of a let down as the years go by for me. The incompetence of those involved with the proposed ruling is embarrassing, yet holds such unjustifiable power and influence.

General Comment

It is my understanding that the ITAR definition is planning to be changed to include internet content such as gun reviews and all other firearms related videos. I wholeheartedly oppose any changes that would make this type of information illegal. As a lawful gun owner I look to online content to teach me about my weapons and how to use them safely. I feel that banning this type of content online is not only an attack to my Second Amendment rights, but to my First Amendment rights as well. I like to believe that I still live in a free country where I can post a review of a firearm online and enjoy firearms related content as well. I shoot pistols and rifles competitively and truly love my hobby. Just like anyone with a hobby I enjoy learning about it anyways that i can. Please don't allow this attack on our civil rights to take place.

Sincerely,

Adam Goodman, MBA

ITAR AmendmentRevisions to Definitions; Data Transmission and Storage

Please do not take the ITAR regulations into the realm of information control. I believe the lack of clarity regarding Technical Data, in the proposal opens the door to possible information censorship and would be an infringement of our first amendment rights. I would like to see some clarity of "Technical Data."

Opening this can of worms as far as censorship goes, on firearms, could set a bad precedence for further censorship regulation impacting all Americans.

The proposed revision of definitions concerning technical data on firearms are chilling to say the least. To regulate internet content concerning what are otherwise legal pursuits is an egregious violation of both the first and second amendment. While other countries may restrict their people's right to both own and discuss firearms, it is not and should not be the policy of the United States of America. Such regulations, which run the risk of restricting the natural rights of citizens, should only be considered by an elected and accountable Congress and a duly appointed court system. This is not the purview of the State Department.

The idea that simple text and information relating to firearms should be 'controlled' the same way a large shipment of arms would be is simply ridiculous.
I cannot see how basic speech and images about a legal topic should be cause for censorship and criminal charges.

General Comment

With the new proposal published on June 3, the State Department claims to be clarifying the rules concerning technical data posted online or otherwise released into the public domain. To the contrary, however, the proposal would institute a massive new prior restraint on free speech. This is because all such releases would require the authorization of the government before they occurred. The cumbersome and time-consuming process of obtaining such authorizations, moreover, would make online communication about certain technical aspects of firearms and ammunition essentially impossible.

Penalties for violations are severe and for each violation could include up to 20 years in prison and a fine of up to \$1 million. Civil penalties can also be assessed. Each unauthorized export, including to subsequent countries or foreign nationals, is also treated as a separate violation.

Gunsmiths, manufacturers, reloaders, and do-it-yourselfers could all find themselves muzzled under the rule and unable to distribute or obtain the information they rely on to conduct these activities. Prior restraints of the sort contemplated by this regulation are among the most disfavored regulations of speech under First Amendment case law.

This new regulation is ludicrous and very poorly worded. It allows for unprecedented violations of free speech of everyone who has discussed firearm information on the internet. Do not allow this to pass.

General Comment

I respectfully submit my opposition to the proposed revision to the ITAR Amendments. It appears the proposed definitions could be used to prosecute persons writing technical articles on sport shooting such as new developments in bullets and/or propellants or accuracy improvements to existing firearms. A citizen who writes an article regarding new techniques in loading hunting or target shooting ammunition or improving performance could be fined or jailed although the information would not impact our military. I feel this revision is ambiguous enough that the rules could be used to arbitrarily censor articles which are open knowledge and are not classified for military applications. There are adequate safeguards in place to prevent transfer of classified military technology under the "National Security Information" or "Official Use Only" rules in place.

I find the recent promulgation of regulations regarding the dissemination of information on firearms ("ITAR Amendment Revisions to Definitions; Data Transmission and Storage.") odious and most likely unconstitutional and I object strenuously.

This is in direct contravention to and in violation of multiple portions of the constitution including, but not limited to, the First and Second amendments, prior restraint, etc.

Please proceed o further in this direction.

C Giunta

General Comment

The Department of State issued a notice on June 3rd in the Federal Register that they wanted to make some changes to the International Traffic in Arms Regulations (ITAR) the documents that restrict what gear, tech, and info can be exported outside the United States. The focus of these changes isnt on the hardware itself, but instead trying to lock down the information. The proposed changes seem to be pointed squarely at online exchanges which include technical specifications (gun reviews), schematics (3D printing diagrams), and training (RFs beloved Self Defense Tip series, and other articles). It seems like a pretty blatant attack on the First Amendment as a workaround to stifle the Second, to me. Gun reviews and other associated postings should be exempt from the regulations. Simply posting the caliber of a firearm online could be considered ITAR restricted technical data and incur millions of dollars in fines. Its all down to how they implement the changes, and whos got their finger on the button. I have to wonder if the individuals writing this type of orders are on drugs. This is nothing short of a violation of the First Amendment and is ultimately illegal. This is a punch in the face of the American people. I am sorry, but I must fight this. This is wrong, and I have not a thing more to say.

"ITAR Amendment Revisions to Definitions; Data Transmission and Storage."

The proposed changes requiring permission from the government to post information about firearms is a gross overreach of the executive branch. This is an infringement on my First Amendment right to free speech as well as my 2nd Amendment right to bear arms. Technical specifications are needed in order to make an informed decision on which arms to purchase and how to use them.

I also believe this is an attempt to shut down access to 3D CAD designs for weapons, an art in its infancy.

The new ITAR regulations that Obama is attempting to impose are not in the best interest of the people of the United States of America. In reading the proposed regulations and analyzing the information I come to realize they are making an attempt to mute, stifle, and strip us of our basic rights. Not only that, they are attempting to cripple any industry who attempts to securely transmit data inside and outside the borders of the United States of America. This will increase the overhead cost of almost every company that is required to use 3D programs and/or encrypt any type of data.

These attempts are getting over bearing and repetitive. They must be stopped. Do not expect us, the citizens of the United States of America, to ignore these obvious attempts in removing our God given rights. They wrote the Constitution of United States to withstand time and any who oppose it.

Hello, thank you for your time. I just would to voice my opinion on ITAR. Ever since i kid i wanted to work in the gun industry and make a difference in it. When i became of age i started watching this potentially banned content. This content allowed me to further my knowledge by light years, and pushing me into the direction I want my life going. By banning this not only is it a huge loss to our community (whole reason its trying to be passed) but its a violation of our first and second amendments. I understand you can not just go after our guns in general and you have to do it in more subtle way, until our rights are all gone. Its not right for someone to tell law bidding citizens what they can and cant do. And as far as the 3D printed guns... Its just not right, you cant just print assemble and shoot. It takes many hours and many skills to get it to work. And even the people that came up with this idea can barely get them to work. And if you have the knowledge to do it. You wont. You will take a solid piece of alloy stock and machine it. And by BATF rules that is 100% legal to manufacture a fire arm as long as you have no intentions to sell it. This bill is a huge infringement on all of our rights. I would like to hear a valid statement on what they think this will do to protect our safety. I feel like all these new bills are just chisels to our second amendment. All of them have the huge flaws and holes where they can be proven will help nothing. How would these new "laws" make our founding fathers feel? Here is an idea, Make the unlawful possession of firearms a bigger deal. Thats just my two cents. Thank you for your time and would really like if you took all of our comments into consideration before passing something that will not stop crime or illegal activity.

General Comment

I have grave concerns about the proposed changes to current ITAR regulations, and how those changes would stifle development of new technology. By redefining export to include posting on the internet, and requiring state department review to do so, the proposed rules are essentially a prior restraint on the first amendment for both "arms" and "software that could support arms". This would have drastic implications for online communities such as Drone Code, whose online software forums and open source development could now be included by these draconian regulations. In addition to this, any videos, or forums for historic firearm collectors, hobby gunsmiths, and innovative designers starting in the firearm industry would have their main means of collaboration subject to State Department prior restraint. I understand the need to protect critical defense technology, but the rules should specifically exempt the following categories:

1. Hobbyist and small drone software code (regardless of whether the code could potentially be used in the future on a weaponized drone).
 2. Historic firearm technical data (drawings, specs, assembly diagrams, CAD files, etc.).
 3. New firearm technical data provided the firearm would be legal for ownership by the US populace. (Drawings, specs, assembly diagrams, CAD files, etc.).
 4. Online forums and media for gunsmiths, firearm innovators/developers, drone enthusiasts, and drone developers.
 5. Technical data of firearm accessories available to the general public.
 6. Software that supports firearm accessories available to the general public.
- Prior restraint of the first amendment should not be forced upon the inventors and hobbyists of the nation under the guise of guarding defense technology.

This is a complete violation to the First Amendment as guaranteed by the United States Bill Of RIGHTS. Let me reiterate: Bill of RIGHTS! This cannot and must not be allowed to pass. "shall not be infringed" should apply to all of the Bill of RIGHTS!

These back door attempts at gun control are wrong and a horrible idea in general! Admiral Isoroku Yamamoto once said "You cannot invade the mainland United States. There would be a rifle behind each blade of grass." He had a very good point! Keeping the people armed adds a good level of security against those who would do harm against us as a nation! What about all the people that the media refuses to report stories on where disaster is thwarted by people using a gun for good?! People are able to protect themselves and their families every day instead of becoming victims because of the Second Amendment! Trying to restrict firearms, particularly by trying to choke it via restricting the First Amendment, is a terrible idea and whole-fully unconstitutional!

For those who believe that more laws prevent gun related crime, look at cities & states with the strictest gun control laws. They have some of the highest gun related crime rate! Places like Wyoming and Vermont with the least amount of gun control laws have some of the lowest gun related crime rates in the entire United States!!! It doesn't take a genius to see which policy is actually working well.

The politicians who are pushing to have firearms restricted are generally the ones who either have no idea what they're talking about or are blatantly lying to the public to push their position based on emotion, fear mongering, and incorrect information. There is a YouTube Video of a senator just throwing buzz words (and giving very incorrect information namely over the rate of fire of a firearm) in effort to scare the general public into submission! If the general public were properly (accurately) informed and not led astray by biased media and dishonest / misinformed politicians, the stigma surrounding firearms wouldn't exist!

Let's address the double standard surrounding the First and Second Amendments! There was a TV anchor who brought a standard capacity 30 round magazine in Washington D.C. on network TV (Illegal) and no charges were pressed! Guess he was protected under the First Amendment maybe? Where's the justice? If anyone else got caught with a 30 round magazine in D.C., they'd be jailed and fined in an instant! What about the man who had an empty shotgun cartridge as a souvenir and got arrested for it? Why was he not protected under the Second Amendment? Where's the justice?

It's time for both sides of the political spectrum to come together and introduce / pass bipartition legislation that would make it illegal to by any means attempt to or restrict or deny any part of the Bill Of RIGHTS and also make it likewise illegal to pass any legislation with the possibility of consequences that restrict the Bill of Rights. This back-door attempt at restricting the Second Amendment by means of choking the First Amendment is a prime example of what should be outlawed!

In the wake of 3D printing technology, the Federal Government is once again trying to control the people! The Government should be working FOR the people, not AGAINST the people! If someone wishes to 3D print a firearm or firearm parts, who's to say the person can't or shouldn't? People who would break the law in the first place sure aren't going to pay any attention to new laws anyway. So suppose a bill was introduced as a compromise to require the person who wishes to print a 3D firearm to go through a background check or already have a Concealed Weapon Permit which requires a background check every 5 years in most states. That would do nothing to stop someone who is going to do it anyway and hinder the good law-abiding citizens; but it'd be enough to give the gun-grabbing politicians something to go home and brag about until they get another bee in their bonnet. "Shall not be infringed" is painfully clear in definition but to the general public, it seems that there are those in power to which the meaning isn't obvious.

In summary, any restriction on any piece or section of the Bill Of RIGHTS is unconstitutional and should cease immediately. This proposed legislation cannot be allowed to pass. Once one of rights guaranteed by the Bill of RIGHTS is taken away, the rest will fall like dominoes and we would find ourselves in a scenario not dissimilar to George Orwell's "1984"! The First Amendment and the Second Amendment has been under attack since the times of The American Revolution! Our forefathers fought and died to guarantee these rights for the American people and now we have people in power in our own Government who would try to take away these rights piece by piece!

Our country is one of liberty and justice and once we start losing either, we've lost who we are and what we stand for as a nation. I challenge you to NOT LET THIS HAPPEN!

Information in the public domain is public and protected under the first amendment; it is not up to unelected bureaucrats to declare what is in the public domain or not. Nor was our government, based on the US constitution, setup to give unelected bureaucrats the right to write new laws on the fly in order to avoid court sanctions (see Defense Distributed case) or the will of american citizens. Nowhere in the Constitution is the federal government given the authority to demand pre-approval of political speech prior to its public dissemination, particularly if the speech contains material taken from the public domain. This rule is nothing more than an other unlawful attempt to push anti-gun legislature on the american people by curtailing their constitutional rights. If the President wishes to pass a law banning any and all materials and data used in the fabrication of firearms by non-federal firearms licensees, then he should work with congress to create such a law, get it passed and then the president can sign it into law, that is how our government works under the U.S. Constitution. The president should not attempt to do this via unelected bureaucratic proxy.

General Comment

I am opposed to the proposed changes to the ITAR AmendmentRevisions to Definitions; Data
Transmission and Storage.

The proposed changes seem to be pointed squarely at online exchanges which include technical specifications (gun reviews), schematics (3D printing diagrams), and training (RFs beloved Self Defense Tip series, and other articles). It seems like a pretty blatant attack on the First Amendment.

An expanded definition of public domain now includes the internet, as well as any mechanism where further distribution of the information is not prohibited. The government wants to require anyone who wants to post technical data to this expanded definition of the public domain (forum posts on the internet, videos on YouTube, articles on gun blogs, old-school print magazines even) to apply to the government for permission before publication. If permission is not granted, the fines could range into the millions of dollars. Posting information to the internet is now considered equivalent to exporting that information. Even if no one outside the US ever reads it.

These changes will impose an unfair burden on law-abiding Americans and they are unconstitutional.

General Comment

I would like to comment on the current changes to the ITAR definitions of defense services, technical data, and public domain and how this relates to the distribution of pertinent information online. The current wording of the changes to the International Traffic in Arms Regulation are such that any *Technical Detail* could range from schematics/blueprints to simple firearm caliber or disassembly, and could be completely barred from the internet without specific permission. Information regarding such Firearms (under 50 caliber) has been disseminated through social media and the internet for years and has posed no threat whatsoever to public safety or military/governmental weapons technology. Redefining these laws and interpretations will protect no governmental secrets, and will infringe upon the first amendment. Small arms *Technical Details* are overwhelmingly not CAD files, or specific schematics, but simple demonstrations as to firearms operation, maintenance, and overall safety. This online information is vital to safe, responsible and intelligible gun ownership in the United States, and is entirely separate from the *Technical Details* required to illegally or fraudulently engineer/produce a firearm. The issue many draw from these changes is the ambiguity in the wording of the law. Restriction of 3D, CAD, and comprehensively integral documents required for the production of military/governmental firearms is not debated, it is the vague nature in which the law is reworded that is concerning. I would like to state that I am, as well as many others, are very alarmed with the new proposed rendition of ITAR. I do not believe that any modification or reinterpretation of the law is needed, and that the current alterations would infringe upon the first amendment and provide none, if only pseudo-protection from the misuse of *Technical Details*. I sincerely hope that these changes be pulled or rewritten to better protect the free exchange of domestic information regarding the mere maintenance, safe operation and understanding of American owned firearms.

Excerpt 1:

The Department proposes to revise the definition of “technical data” in ITAR § 120.10 in order to update and clarify the scope of information that may be captured within the definition.

Paragraph (a)(1) of the revised definition defines “technical data” as information “required” for the “development,” “production,” operation, installation, maintenance, repair, overhaul, or refurbishing of a “defense article,” which harmonizes with the definition of “technology” in the EAR and the Wassenaar Arrangement. This is not a change in the scope of the definition, and additional words describing activities that were in the prior definition are included in parentheses to assist exporters.

Excerpt 2:

Paragraph (a)(1) also sets forth a broader range of examples of formats that “technical data” may take, such as diagrams, models, formulae, tables, engineering designs and specifications, computer-aided design files, manuals or documentation, or electronic media, that may constitute “technical data.” Additionally, the revised definition includes certain conforming changes intended to reflect the revised and newly added defined terms proposed elsewhere in this rule.

Excerpt 3:

The proposed revised definition also includes a note clarifying that the modification of the design of an existing item creates a new item and that the “technical data” for the modification is “technical data” for the new item.

General Comment

I oppose this new rule, as it could be broadly interpreted to include discussions of the technical aspects of firearms that are commercially manufactured and sold in the US, as well as penalize people for discussing technical data that is either directly related to commercially available firearms or has been made available to the public by various mediums. For example, in excerpt 1 in the attached PDF, the definition of technical data is so vague that it could apply to Youtube videos showing the field stripping or modification of civilian weapons the US military has used or are the basis of civilian firearms, such as the AR-15 (which the M16 is based on) or the M249 (which has a civilian, semi-automatic version in production).

In excerpt 2, the formats for technical data include many examples of data that are relevant and vital to the civilian firearm community and those generally interested in military history, such as diagrams, models, tables, formulas, manuals/documentation, and electronic media. The firearms community and industry in particular heavily relies on this data for maintaining and improving older weapons, producing better ammunition, and creating replacement parts for out-of-production items. Also, since many military technologies eventually diffuse into the civilian market, penalizing people for publishing some of this data will be impractical and possibly illegal.

In excerpt 3, there is mention that modifying the design of an item creates technical data for a new item. In such a case, individuals and corporations could be penalized for distributing diagrams, pictures, or files of their creations, should their product be considered related to a "defense article." For example, someone could create a 3D printable hand guard for an imported rifle or shotgun, then release it on the

Internet for free so people can more easily comply with 18 USC 922R. Under this executive order, that could be considered distributing technical data on a defense article and lead to prosecution.

Care must be taken to avoid infringing on the rights of law abiding Americans when executive orders like this are crafted. In its zeal to prevent global arms trafficking, the current administration can easily turn thousands of citizens into criminals, especially when most people discussing these topics or releasing what might be considered technical data about defense items on the Internet do not know this proposed executive order EXISTS. No action should be taken until the consequences of this order, as it is currently written, are carefully studied and considered, in order to avoid harming individuals and organizations that use and disseminate information that might be caught in this executive order's umbrella.

This is nothing more than an attempt on thr part of the government to control the internet, as the prsident mentioned before. He want's to be able to "shut down" segments of the internet during periods of social unrest, Like in the arab spring. What is it about the 1st amendment and the 2nd amentment you people don't understand? I believe this was started because of the 3D printer information on building a gun. Have any of you actually looked into this or is this just knee jerk, liberal reaction? If this passes, It WILL be challenged in court as a violation of the 1st amendment. Good luck with that

Dear sirs,

I have just read the text of the proposed "Revisions to Definitions" that are the subject of the proposed regulations upon which I am commenting. Totally aside from its being unwarranted prior restraint of free speech it is also exceedingly nonspecific and will likely cause many unwary and innocent citizens to commit infractions unwittingly. Depending upon the redefinitions adopted in the final rules many of the processes that advance research into this or unrelated areas become punishable infractions.

To give one example: Suppose I were to give details on replacing certain plastic parts with nonferrous metallic parts of similar configuration in a 3D printed object in an online forum, in order to improve the service life of an ultrasound emitter. Even though my intent was to reduce the costs of a medical device, are not the same principals applicable to firearms or sonar? Since this forum is unclassified and available internationally, have I now set myself up for sanctions under the new rule? If I link to an article that contains similar information have I committed an infraction? How can I know? The proposal as written does not define the answers to these questions or a host of others.

I admit that the existing rule has quite useful purpose in protecting defense technology from proliferation. But, the way the "redefinition" it is written could be misused to quash unrelated innovation or stifle political interests.

I would request that this proposal be withdrawn. If the purpose of the proposal is still found to be in the public interest then: 1) Carefully define the terms prior to resubmitting the proposal so that the people have some idea what may actually result in an infraction and 2) more narrowly tailor the focus of the proposal so that it meets only the intended objective and thus would be less likely to be misused.

Thank you for your consideration.

i saw a video on youtube about a law you want to apply banning just about everything to do with firearms on the internet and its just bs. I love guns and gun videos i used to be bullied and borderline depressed and a boring individual before firearms came into my life and i just cant stand to lose it. Firearms have been in my family for generations and i have used youtube to make myself familiar with firearms so ive made friends and connect with people on a social enviroment this law is not going to make the world a better place or the u.s inparticular this is just stupid. Please for the good in our freedom, in the u.s, in yourselves and me dont go through with this the 3d print stuff can go though thats scary af. Thanks you for your time

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Sincerely,
Philip Wadsworth

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled

effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Sincerely, Joseph Rodrigues
1016 W. McDaniel St. Apt.A2

Comment on DOS-2015-0023-0001

Submitter Information

Name: Bob and Dana Kern

Address: United States,

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Sincerely,
Bob and Dana Kern

Submitter Information

Name: Tyler Lawton

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Sincerely,

PUBLIC SUBMISSION

General Comment

To whom it may concern:

This is nothing but another attack on the "First Amendment"...Freedom of Speech.

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

General Comment

Dear State Department Arms Control Regulators,

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet. Any re-write of gun-related speech on the Internet is a violation of the First and Second Amendments.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines. Sportsmen and gun enthusiasts could be punished for merely sharing technical info and/or their passion for hunting or firearms collecting with like-minded folks.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety as it violates the First and Second Amendments!

General Comment

To The United States State Department, particularly the Directorate of Defense Trade Controls (DDTC):

I strongly oppose the rewrite of the State Departments International Traffic in Arms Regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

Under these new regulations and revisions electronically posting information on virtually any firearm or ammunition could be defined by the Obama administration, or future administrations, as requiring, not only government permission, but potentially a government license to do so. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of our land!

Sincerely,

William James
Amherst, NY

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet. How can hunters and firearm enthusiasts troubleshoot firearm function issues or share their common interests if they can't chat about it on the Internet?

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

Submitter Information

Name: Aaron Robinson

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

To whom it may concern:

These changes in arms control regulations are ridiculous and unconstitutional. These changes would in no way protect people from arms related crimes or injury, and serve only to take away the rights of the American People.

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR).

I feel this could grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language which includes making technical data available via a publicly available network (e.g., the Internet) could put anyone who violates this provision in danger of facing decades in prison and massive fines. Therefore, posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license.

I also oppose the addition of the word software into these regulations, as it looks to be an effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. The First and Second Amendments are still the law of the land and these regulations are defying them!

Please read these petitions advocating municipal environmental
contraception funding, which is increasingly politically realistic due

to The Big Sort in more and more towns, and helps women's rights, quality of life, and school taxes as well as being at

least 5 times more cost-effective than any other environmental effort.

The prochoice and contraception movements are placing too high a priority on defensive actions in the red states when we should be going on the offensive, the side of "change", in the blue states, and cities.

The worst places

will get even worse no matter what we do, but the unrealized political potential, the low hanging fruit, is in making the best places even better. This opportunity is being caused by The Big Sort. Mayors are not answerable to rural voters, unlike governors and presidents.

Comment on DOS-2015-0023-0001

Submitter Information

Name: Jeff Knippa

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

General Comment

To Whom it may Concern:

The proposed changes to ITAR constitute a grave infringement of both the first and second amendment, in response to what constitutes a hypothetical problem. While 3d printed guns could possibly become a problem in the future, at present the technology isn't developed enough to present a real threat. There exist numerous better methods to produce firearms with conventional handtools and metals.

The experience of child pornography regulations is also relevant here. Despite international efforts, it still remains relatively easy to access. The internet makes it so that if one wishes to access certain information, one can with enough effort. This rule change would unduly burden and criminalize hobbyists and lawful enthusiasts, while doing little or nothing to stop those that truly present a threat. As a life long democrat, I implore Mr Obama and his state department to strike this order from the record, as this is punitive censorship at its most foul.

Submitter Information

Name: Lawrence Kettinger III

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Comment on DOS-2015-0023-0001

Submitter Information

Name: Todd Kabella

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Submitter Information

Name: Dan Shibler

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Comment on DOS-2015-0023-0001

Submitter Information

Name: Kevin Doss

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines. This could even squelch safety information that should be readily available.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

Submitter Information

Name: Brian Menz

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Comment on DOS-2015-0023-0001

Submitter Information

Name: Jeffrey Anderson

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

General Comment

:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

General Comment

To Whom It May Concern:

Re: ITAR AmendmentRevisions to Definitions; Data Transmission and Storage

I must enter the strongest objection to this proposed rule that would fundamentally change the spirit and letter of these laws (International Traffic in Arms Regulations (ITAR), and the federal Arms Export Control Act (AECA).

This proposed rule change would trample our First Amendment Right to Freedom of Speech and the Freedom of the Press.

This proposed rule would also have no effect on crime, except to criminalize the actions of law abiding citizens and journalists. Information publicly accessible on the internet would now have to be secured (adequately, which is not defined in the Federal Register notification) or the journalist/private individual would be subject the Export Licensure requirements (including the penalties for not having a license: Up to 20 Years in Federal Prison, a \$1 Million fine, and potential Civil Penalties). If a criminal wants any such information that would be forbidden by this ill-conceived rule there are many publications that are freely available at any library or book store or will be accessible on servers located outside the United States.

Posting of any information via email, internet article or blog, social media sites related to firearms & ammunition, including performance, technical specifications, maintenance instructions are considered

Public Domain and not subject to ITAR. 22 CFR 120.11 Paragraph (b) gives the Federal Government the right to determine what is and is not in the Public Domain.

According to 22 CFR 120.11 Paragraph (b), I would need authorization from one of the listed agencies to publish that information on my personally owned firearms, even the results from my most recent competition/training shoot. And, as in the Defense Distributed case, the process can easily be abused with prior restraint in place until the government has acted, wherein it then would have no reason to rule in order to achieve suppression.

The Rights enumerated in the Bill of Rights are sacred to me and critical to our free and open society and may not be modified in any way unless through a change to the Constitution of the United States of America.

The Federal Government of United States of America is a government of the people, for the people, and by the people. The Executive Branch does NOT have the authority to make law that authority belongs to the United States Congress (which is also bound by the Constitution) and this proposed rule does not meet the spirit or letter of ITAR or AECA.

This proposed rule (Public Notice 9149) must not be implemented.

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Sincerely,

PUBLIC SUBMISSION

General Comment

To whom it may concern:

While I see the logic in preventing the wide distribution of blueprints for 3-D firearms (which clearly present a potential safety issue at airport checkpoints, for example), I strongly oppose the proposed amendments to the State Departments arms control regulations (ITAR), which could potentially grant the Department of State excessive power in terms of monitoring and controlling virtually ANY gun-related speech on the Internet.

The new language, which includes making technical data available via a publicly available network (e.g., the Internet), could effectively place anyone who violates this provision in danger of facing a hefty prison sentence and/or significant fines. Depending on interpretation, the expanded scope could even include firearms enthusiasts sharing instructions on how to strip a Glock 17 or demonstrating how to reload a specific rifle cartridge on YouTube.

I strongly urge you to abandon the proposed amendments, which pose a clear threat to my rights under the 1st Amendment.

Thank you.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

I think changing this is a mistake. You are infringing on the rights of your own people. Freedom of speech is absolute. Thomas Jefferson said the blood of tyrants and Patriots have to be spilled to renew freedoms. Let's not let it get to that. What yall are doing is wrong following the orders of the elite. There will be a time when its to late to go back to what's right. Yall can't even handle the responsibility bestowed upon you now. Would love someone to explain to me why what you are doing is right. Because half of the stuff I watch on line will disappear. Or that I can't download cad files on how to make gun parts. Please you are wanting to start something with the gun owners in this countrt not including all the vets that you don't trust coming home from fighting yours for bullshit. Then when they get home you treat them like criminals. There is a change coming and you are pushing it hard forward

General Comment

Mr Secretary,

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR) as proposed. This potential grant to the State Department of a wide-ranging power to monitor and control gun-related speech on the Internet chafes the oath of office you took to support and defend the Constitution of the United States of America.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- would put anyone who emailed a friend the procedure to simply render a firearm safe in violation of this provision and in danger of facing decades in prison and massive fines. Posting information on virtually any firearm or ammunition could be defined by the Executive branch as requiring, not only government permission, but potentially government license. Violators face significant criminal penalties. This smacks of prior restraint of free speech and would significantly impede a citizen's right to keep and bear arms.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printing, computer aided design, computer numeric control machining, and nearly any other use of a computer where something attached to, related to, or comprising an explosive propelled projectile delivery system (gun) is supported by digital computation, word processing, digital imaging, or any number of advances available to mankind thanks to Alan Turing.

I urge you to withdraw these new proposed regulations in their entirety. It would be consistent with our oath to support and defend the Constitution which contains the First and Second Amendments. They, too, are still the law of the land.

Sincerely,
David Garten

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Second Amendment supporters will never accept these unconstitutional "rules" and will challenge them in every way possible. Organizations like the NRA and Gun Owners of America will support our efforts to keep our freedoms.

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the

State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) --

could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring,

not only government permission, but potentially a government license. This means violators would potentially face significant

criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban

3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments

are still the law of the land!

Sincerely,

Joseph B Murray
Major USMC (ret)

What has happened to our government in the last few years, have you all been living in a different country? I spent 10 years in the service to protect my 1st & 2nd amendment rights, and we the people are not going to let you undermine them. Remember terms are limited and a new head will make changes to the leadership as needed.

Comment on DOS-2015-0023-0001

Submitter Information

Name: Benjamin Sutherland

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Sincerely,

PUBLIC SUBMISSION

General Comment

Dear Sir or Madam:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet. The Internet shall remain free speech territory.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines. Surely you understand that?

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land! My Constitution says so. Check it out. Article Six, Paragraph two.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Sincerely,

MJ Jens

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Sincerely, Judith Dollar

Comment on DOS-2015-0023-0001

Submitter Information

Name: Stanley F. Moskal II, M.S.

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Sincerely, Mr. Joseph C. Micolucci

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

Comment on DOS-2015-0023-0001

Submitter Information

Name: Timothy Myer

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land.

Comment on DOS-2015-0023-0001

Submitter Information

Name: C C

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Also, as a small business gunsmith, I have forgone becoming a manufacture due the State Department's current requirement of manufacuters registering with ITAR for \$2500.00 per year. This is an unnecessary expense for a small firearms manufacturing business that does not intend to export any firearms. Please consider changing this requirement so that small business can thrive.

Richard Connelly

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

General Comment

o whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Submitter Information

Name: George Hill

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

General Comment

Let's use some good common sense on these new ITAR regulations. I'm a competitive shooter and rely on sharing gunsmithing tips, reloading data, shooting gear information and reviews on the internet. I'm a hard working railroad employee and pay more than my fair share of taxes. I realize, somehow you're scared of people 3D printing guns. Are you aware that it's perfectly legal for an individual to hand craft their own firearms? Granted, a felon should not be allowed to purchase or possess a firearm, but do you really think you can stop that felon from making a gun, bomb or any other sort of destructive device? Stop stomping on the rights of law abiding citizens trying to control those who are not. Go after the disease and quit trying to cure the symptoms at every law abiding citizen's expense. Making it illegal for us, in the shooting community, to share information about shooting, gun cleaning, scope calibrating, gun accessories and so on is absolutely ludicrous. It's a violation of my first amendment right and clearly a back door to restrict my second amendment right.
